RENEWABLE ENERGY PROGRESS REPORT: The construction of our large 24/7 renewable energy project in Delta is making giant strides as shown in the video clip.

This project will feature Five Disruptive or Breakthrough renewable energy technologies.

The Three Completed Main Development Stages:

1. R&D 2. Manufacturing of all components in large quantities 3. Scalable construction quickly done in large volumes

Now that these stages have been completed, the secrecy required to protect our many patents and technologies is slowly being waived

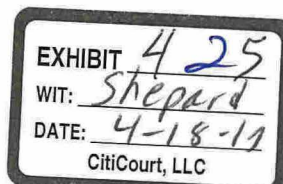

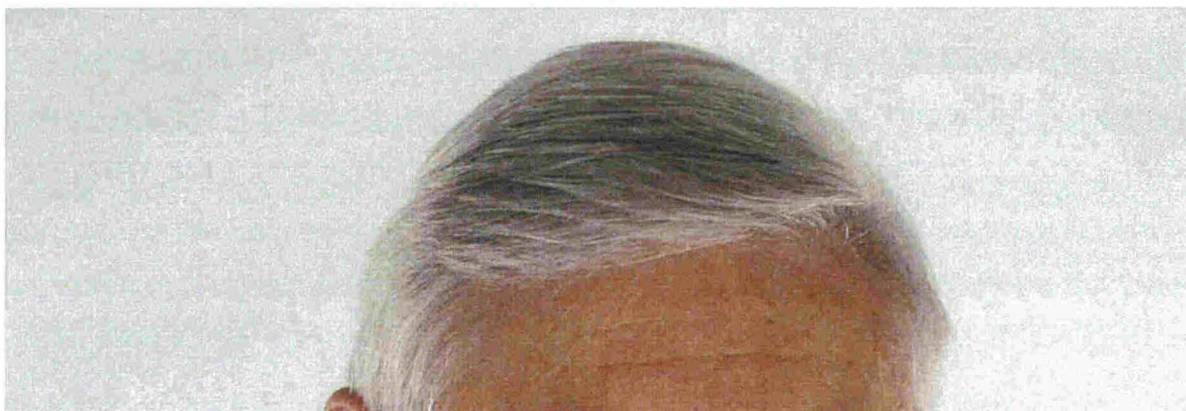

The people in Utah and elsewhere will be blessed for generations to come with affordable clean renewable energy, abundant clean water and pollution- free affordable vehicles of every kind.

I know the significance of what has been accomplished by our inventor, Neldon Johnson, is far from being understood by government and private organizations. However, information will be released on a regular basis from now on.

Our next tour to see some of this technology and construction site in Delta, Utah will be October 20th. E-mail me if you'd like to attend.

Regards,
