Start Your Own RaPower3 Business

Do you want to see America energy independent? Do you want to see the cost of power go down? All of the solar thermal lenses in RaPower3 grid-scale projects are owned by independent RaPower3 business owners who are making a difference and making money! Own your own RaPower3 business and join the RaPower3 Solar Revolution.

RaPower3 Independent Business ownership is free and included with the purchase of at least one of our patented Solar Thermal Lenses. You must have a sponsor to buy. If you do not have a sponsor, you may request one by emailing greg@rapower3.com.

Instructions

Your lens purchase agreement, operation and maintenance agreement, and distributor application can be downloaded by clicking the buttons to the right along with other helpful documents. When you click the "[BUY NOW](#)" button all of these agreements will be autofilled as you proceed. The process takes about 10 minutes.

Please determine the number of lenses you wish to purchase before clicking the "[BUY NOW](#)" button. If you need help determining how many lenses you should purchase to maximize your business profits, please refer to your sponsor or [CLICK HERE](#) for help in determining how many lenses you should purchase for your business. For tax advice, please seek council from a CPA or other qualified tax professional. After clicking "[BUY NOW](#)", put in the sponsor name and follow the directions to apply to become a RaPower3 distributor and purchase your lenses. Becoming a distributor sets you up in your own Independent Solar Business, which is necessary in claiming the valuable depreciation on your taxes. After completing your online application, you are required to pay the down payment on your lenses by check or money order before your purchase and business is finalized. If your down payment is not recieved within 15 days, your Independent Business request will be cancelled.

Sponsorship Rules

1. You cannot sponsor a spouse.
2. You cannot sponsor underage children including your own.
3. You can sponsor children and/or relatives that are of age and pay taxes.
4. You can sponsor other businesses that you may be involved as long as they are separate business entities with their own federal identification number.

This is not an investment. It is simply a purchase of solar thermal lens(es). Therefore, there is no K-1 form, prospectus or securities issue. This is not a purchase of solar panels (photovoltaic) for a residence, but rather a purchase of custom solar thermal lenses that will produce heat that could be used for a variety of industrial and commercial purposes.

70% financing is provided directly from the company. No credit check will be performed. Every purchase instantly qualifies and is automatically enrolled in the 70% financing program with a valid Tax Identificaiton Number from the purchaser. The purchaser may opt out of the company's 70% financing; in such case, the full price of the lens(es) is due at the time of purchase. Payments and interest on the balance owed are deferred until 5 years after the lens(es) begin generating rental income. At the time of purchase, the owner of the lens(es) will enter into an Operating and Maintenance Agreement with LTB, LLC, which includes an annual rental fee of \$150 per lens for the use of the lens(es). Payments to the company on the balance owed by the owner of the lens(es) will be paid directly by the operations and maintenance company, LTB, LLC, subtracted from the rental fee payment as per the Operations and Maintenance Agreement. The purchaser retains all tax credits and other tax incentives for the total purchase price of the lens(es). Please consult with a qualified tax advisor or CPA on how this may apply to you.
